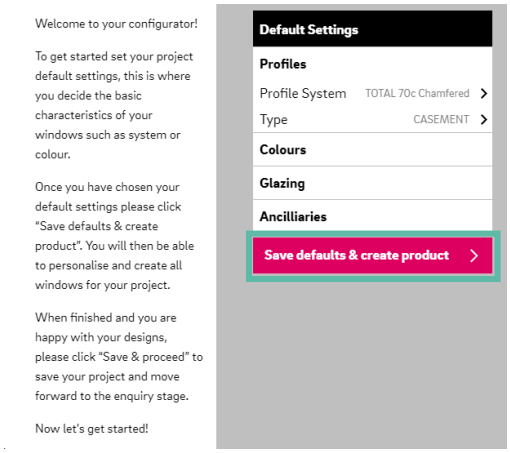
Step by step instructions - How to create a front door

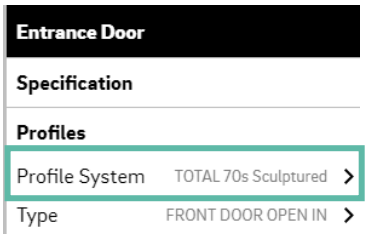
1st Step:
Create your Default Settings

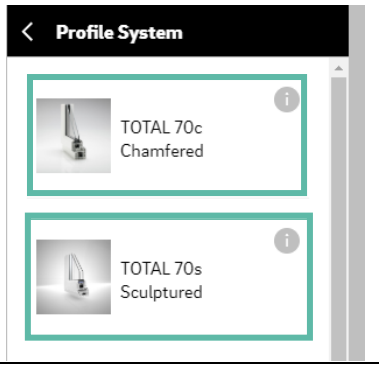
The default settings set the preferences for all windows and doors you create in a project. Once you have chosen the characteristics required for your project click on “Save defaults & create product”



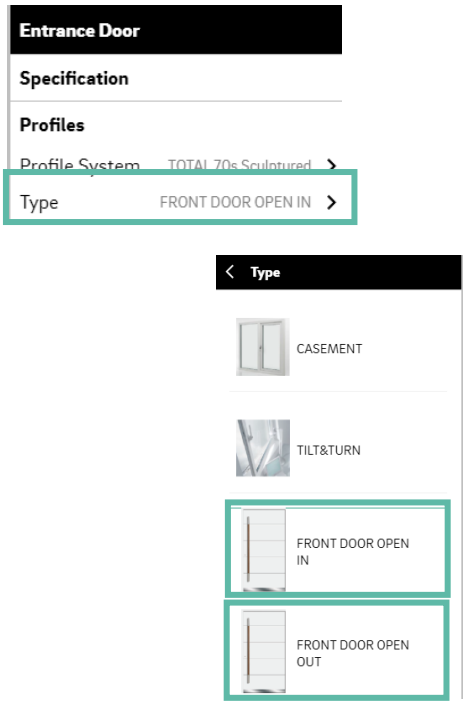
2nd Step:
How to change Profile System

Click on “Profile System” and select either profile system “Total 70c Chamfered“ or “TOTAL 70s Sculptured”



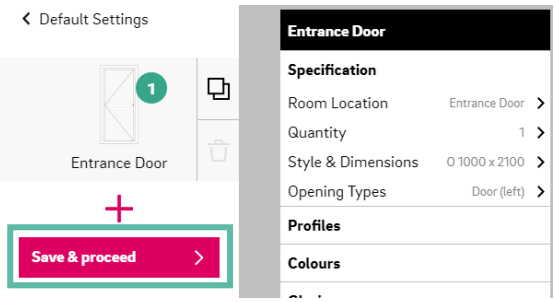


3rd Step:
How to change Door Type
Click on “Type” and select “Front Door Open In” or “Front Door Open Out” depending on what style of door is required.



4th Step:
Make the additional changes and click on “Save & proceed”
You can now go on to change addidtional features of the door. For example:- dimensions and partitions, add bars or provide specific information in the notes section.

Once completed don´t forget to click on “Save & proceed” and send the quotation request to your connected fabricator. They will then return back to you the quote.



Features & Benefits

Work on the go | Save time | Manage projects | Increase conversions | Avoid delays | Quick connection

We wish you every success with your business.
