# Systems EuroDesign 4500 and Iconic 700 with Packaged Terminal Air Conditioner integration

REHAU Systems EuroDesign 4500 and Iconic 700 window platforms seamlessly integrate many commercially available Packaged Terminal Air Conditioner (PTAC) louvers and blank off panels, both enhancing weather resistance and improving aesthetics. Most PTAC louvers and blank off panels match the architectural finishes used on the PVC profiles while providing clean and unified aesthetic appeal.

## **Louver and insulated blank-off panel directly glazed into the frame pocket**

Allow for better control of any condensation that forms inside the pocket. The system EuroDesign 4500 glazing pocket accommodates louvers and insulated blank-off panels up to 1 3/8 in (35 mm) thick and system Iconic 700 will accommodate louvers and insulated blank-off panels up to 1 in (26mm) thick

## **High-performance Condensation Resistance Factor (CRF) frame rating of up to 77**

Reduces the risk of condensation on the room side of the system. Unlike traditional mechanically joined frames, the fusion-welded corners of our uPVC frames create a sealed unit that eliminates leaks due to condensation in the system and water from the exterior entering the system

## **Impact-rated glazing**

Provide additional security, tighter seal and greater comfort

## **Variety of configurations available**

Provide architectural freedom and fit for each project
