

Tilt-turn, hopper, fixed windows

The REHAU Geneo[™], also known as system 4700, is for the eco-conscious home or building owner serious about energy efficiency. Our innovative, high-tech RAU-FIPRO[™], a proprietary fiber composite material, and unique profile design take REHAU tilt-turn technology to its highest levels of strength and thermal performance. This system is offered in white and can be laminated with solid color or wood-grain foils.

1 RAU-FIPRO profile core

Ensures excellent stability and torsional rigidity making it possible to build larger windows without steel reinforcement

2 Six-chambered frame

Provides unmatched thermal insulation, to the level of German Passivhaus standards

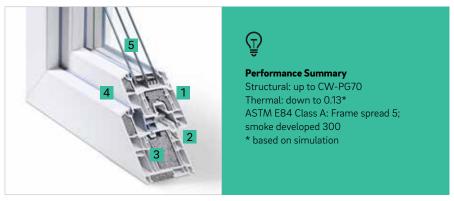

- Integrated reinforcement system with "ladder-shapped" screw channels
 Provides stiffness, stability and secure hardware attachment
- Innovative compression-seal technology

 Reduces closing pressure significantly, making window operation easy and extending the service life
- 5 2 3/32 in (53 mm) glazing channel

Accommodates a wide glazing range, increasing both thermal and acoustical insulation

6 Multiple locking points surrounding the sash

Provide extra security and tighter seal against sound, air and water infiltration
