

RAUVOLET ACOUSTIC LINE

COMBINING STORAGE SYSTEMS WITH EFFECTIVE ACOUSTIC PERFORMANCE

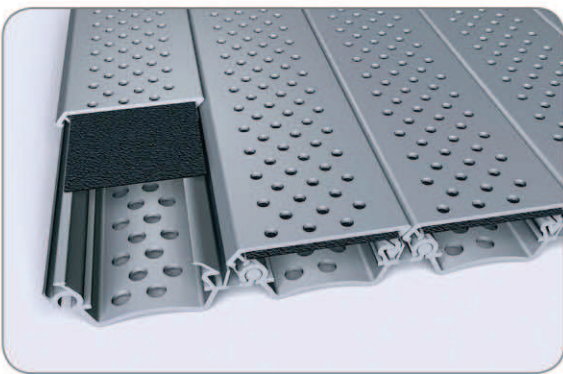

THE INTELLIGENT SOUND ABSORBING ROLLER SHUTTER SYSTEM

Form meets functionality with the intelligent RAUVOLET acoustic line, a versatile roller shutter system for cabinets, partitions and wall applications. RAUVOLET acoustic line simultaneously tackles three common interior planning issues – acoustic, space and design – for greater design flexibility.

ADVANTAGES:

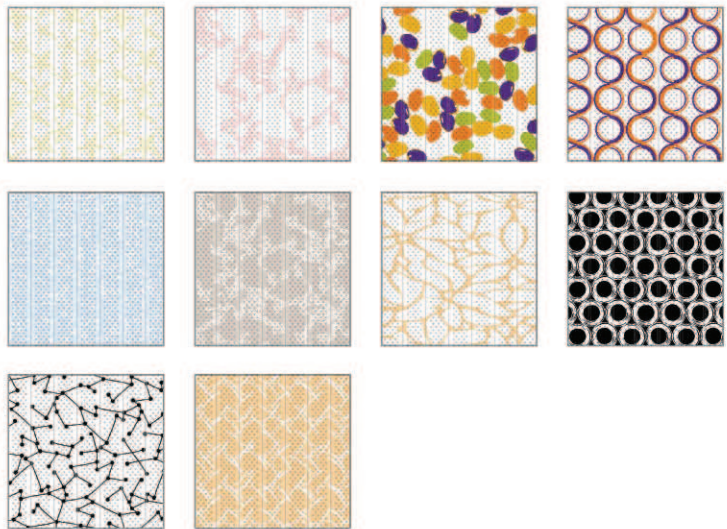

- Enhance room acoustics by reducing unwanted noise and distractions for optimal occupant comfort.
- Widen your functional space by up to 30% by eliminating opening space required by traditional swing doors.
- Stretch your creativity – come see your own design creations come to life on the Acoustic line.

RAUVOLET acoustic line features a special, patented profile geometry with holes along the length of the profile to facilitate the entry of sound waves. The hollow section within contains an acoustic, non-woven fabric which soaks up sound energy and prevents it from re-emerging.

12 mm PROFILE

RAUVOLET acoustic line 12 mm is available in an unlimited range of individual printed designs as well as in all variations of solid colours and metallic silver.

The versatility of RAUVOLET acoustic line means it can be easily integrated in different applications anywhere where an acoustic-conditioning benefit is required.
