

RAU-FIPRO

The Future Within

Fiberglass and uPVC have distinct advantages—but together, they transform into a superior material, without any of the downsides of either. The groundbreaking formula of RAUFIPRO combines fiberglass and uPVC together for a material that leads the way in design and capability.

RAU-FIPRO—The future of fenestration materials is here.

Longevity

Designed for zero leakage¹

- Traditional fiberglass windows have corner joints that loosen and eventually let in water and drafts
- RAU-FIPRO's uPVC component allows for fusion-welded corners designed for zero leakage

¹ vs fiberglass windows and doors with mechanical corners

Strength

More than 2x stronger²

- Reduces the need for metal reinforcements in standard sizes
- Reinforcements can still be used to create even larger sizes for showcasing beautiful views

² vs uPVC windows and doors

Comfort

>10% better thermal performance³

- Creates highly energy-efficient windows and doors that will save money on monthly energy bills
- Helps the environment and supports sustainable building techniques

³ vs uPVC windows with metal reinforcements
