

MORE FLEXIBILITY, FOR SURE.

RAUVITHERM

THE EFFICIENT, RELIABLE AND FLEXIBLE WAY OF SUPPLYING LOCAL HEAT

Easy to lay: three-layer ready-insulated local heating system pipe for flexible use on sites where space is short

Easy to connect: medium pipe with tried and tested REHAU compression sleeve jointing technology

Efficient laying: pipe system in long coils or site-specific cut lengths

The new ready-insulated local heating pipe system for a touch more reliability, flexibility and efficiency!

Structure:

- Tried and tested REHAU medium pipe made of high-density cross-linked polyethylene (PE-Xa) with oxygen diffusion barrier (EVOH) and orange protective layer
- Insulation made of crosslinked PE foam, DUO pipes (see illustration) have extra core insulation
- Corrugated and insulated casing made of foamed polyethylene

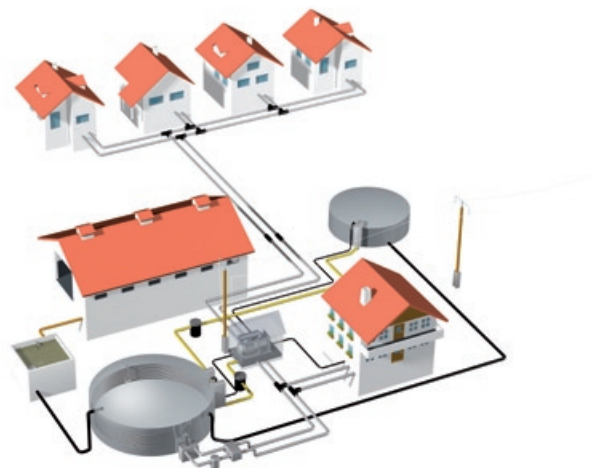

Characteristics:

- PE-Xa medium pipe for flow temperatures up to 95 °C, can be used for up to 50 years depending on flow temperature
- Longitudinally watertight pipe system by virtue of closed-cell welded insulation layers plus insulation welded to casing
- Excellent heat insulation values provided by compact insulation consisting of core insulation and casing of up to 50 mm
- High degree of wear resistance provided by strong, solid outer casing up to 5 mm thick

Advantages:

- Extra reliability: first longitudinally watertight pipe system incorporating building site-friendly robust casing
- Extra efficiency: first completely ready-insulated local heating system pipe
- Extra flexibility: first local heating pipe system to provide ultimate ease of laying as well as longitudinal watertight properties and to come in particularly long coils
- Extra service: the REHAU Planning Centre provides its expertise in planning your project

More flexibility for sure: RAUVITHERM

On your next project, be sure to profit from the excellent advantages provided by REHAU products and REHAU know-how!
