SYSTEMS 4500 & 700

PTAC (PACKAGED TERMINAL AIR CONDITIONER) LOUVER INTEGRATION

REHAU has engineered its Systems 700 and 4500 window platforms to seamlessly integrate the PTAC louver, both enhancing weather resistance and improving aesthetics. The louver features an architectural Kynar® finish matching the architectural finishes used on the uPVC profiles while providing clean and unified aesthetic appeal.

Louver and insulated blank-off panel directly glazed into the frame pocket
Allows for better control of any condensation that forms inside the pocket. The system 4500 glazing pocket allows utilization of insulated blank-off panels up to 1 3/8 in (35 mm) thick.

High-performance CRF (Condensation Resistance Factor) frame rating reaching 77
Reduces the risk of condensation on the room side of the system. Unlike traditional mechanically joined frames, the fusion-welded corners of our uPVC frames create a sealed unit that eliminates leaks due to condensation in the system and water from the exterior entering the system.

Impact-rated glazing and louvers
Provide extra security, tighter seal and greater comfort.

Variety of configurations available
Provide architectural freedom and fit for each project.
