

# RAU-FIPRO

## The Future Within

Fiberglass and uPVC have distinct advantages—but together, they transform into a superior material, without any of the downsides of either. The groundbreaking formula of RAUFIPRO combines fiberglass and uPVC together for a material that leads the way in design and capability.

**RAU-FIPRO—The future of fenestration materials is here.**

### Longevity

**Designed for zero leakage<sup>1</sup>**

- Traditional fiberglass windows have corner joints that loosen and eventually let in water and drafts
- RAU-FIPRO's uPVC component allows for fusion-welded corners designed for zero leakage

<sup>1</sup> vs fiberglass windows and doors with mechanical corners

### Strength

**More than 2x stronger<sup>2</sup>**

- Reduces the need for metal reinforcements in standard sizes
- Reinforcements can still be used to create even larger sizes for showcasing beautiful views

<sup>2</sup> vs uPVC windows and doors

### Comfort

**>10% better thermal performance<sup>3</sup>**

- Creates highly energy-efficient windows and doors that will save money on monthly energy bills
- Helps the environment and supports sustainable building techniques

<sup>3</sup> vs uPVC windows with metal reinforcements
