

RAUKANTEX VISIONS

THE FINISH OF GLASS WITH THE BENEFITS OF POLYMER

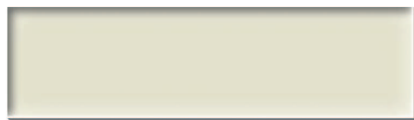

Glass is synonymous with clarity, light and openness. The application areas for this material are as varied as its many colour options. With RAUKANTEX visions, REHAU combines the unique appearance of real glass with the beneficial characteristics of polymer materials, such as its robustness and light weight. Through the transfer of the printed décor to the underside of the transparent carrier material PMMA, the illusion of depth is created. In the event of a radius or chamfer, light is diffused as would be the case with real glass. When combined with boards/laminates in the same colour, the appearance of a deceptively real sheet of glass can be achieved.

ADVANTAGES:

- Made with high quality transparent material
- Easy to process; no special tools required-- but has greater impact resistance and is lighter than real glass
- No reworking on radius and can be polished
- Gives the visual appearance of depth effect without the frame effect
- When chamfering through-coloured material, light is refracted in the same way as would be the case with real glass
- The same decorative design can be selected or used as a contrast edgeband
- Diverse colour variants, matched to popular boards/laminates.

MATERIAL: PMMA
LACQUER TYPE: Standard lacquer
DIMENSION: 23 x 2 mm
AVAILABILITY: From 100 meters

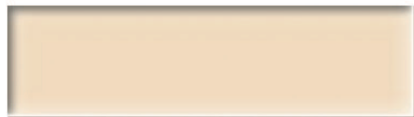

1392E Bianco

1395E Ice blue

1391E Cream

1389E Lime green

1315E Sky blue

1312E Mint green

REHAU's new V groove has a split design feature allowing high gloss and matt finish to be incorporated within one edgeband. By ensuring the top section of the edgeband has an exact lacquer match to that of the surface being edged, the impression created is that the surface and the top section of the edgeband is all made from one piece, with the lower section of the edgeband having a contrasting matt finish. By cleverly incorporating two different levels of lacquers within one edgeband, the overall impression of a moulded surface is achieved, suggesting a surface created out of one piece of material.

MATERIAL: PMMA
LACQUER TYPE: 2-gloss lacquer (super high gloss lacquer - Matt lacquer)
DIMENSION: 23 x 1,3 mm
45 x 1,3 mm
AVAILABILITY: From 100 meters
